Part III DETAILED ACTION

1. Claims 1-17 are pending.
2. Applicant's election without traverse of Group I, claims 1-7 in Paper No.8 is acknowledged.
3. Claims 2-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 is indefinite in the recitation of characterized because in scientific parlance characterization may imply one or more physical steps or procedures to identify a product. Since these physical steps are not recited in the claim the claim is indefinite and ambiguous.

Claim 3 is indefinite in the recitation of the phrase selected from the group comprising. It is improper Markush language to recite comprising, correction to consisting of is suggested.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-6 are rejected under 35 U.S.C. § 102(b) as being anticipated by Silvestri et al. (U).

Silvestri et al., teaches the treatment of SLE with anti-idiotypic antibodies which bind the 8.12 and F4 idotype (abstract, in particular). Silvestri et al., also teaches that said antibodies were isolated from IVIG being passed over a column which had anti-DNA antibodies bound to it, wherein said anti-DNA antibodies had the 8.12 and F4 idiotypes (page 92-93, in particular). Lastly Silvestri et al., teaches administering said anti-idiotypic antibodies intravenously (see Title).

The prior art teachings anticipates the claimed invention.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to

be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

5. Claims 1 and 7 are rejected under 35 U.S.C. § 103 as being unpatentable over Silvestri et al., (U), in view of U.S. Patent No. 5,096,704 (A).

Silvestri et al., has been discussed supra. The claimed invention recited in claim 7 differs from the prior art only by the recitation of a method for treating a patient with an autoimmune disorder with an antibody composition, wherein said antibody composition is given as a dextrose saline solution.

However, the '704 patent teaches that antibody compositions for treatment purposes can be given in a dextrose saline solution (column 6, lines 1-14, in particular).

One of ordinary skill in the art at the time the invention was made would have put the antibody composition taught by Silvestri et al., in a dextrose solution taught by the '704 patent since it is well within the purview of one of ordinary skill in the art to determine route and solution makeup of therapeutic antibody compositions. From the teachings of the references, it is apparent that one of ordinary skill in the art would have had a reasonable expectation of success in producing the claimed invention. Therefore, the invention as a whole is prima facie obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the references.
